RESEARCH INTERESTS

I am a computational scientist with heavy math, modeling and simulation experience in engineering and life sciences domain. Post-PHD, I have 12+ years' experience in analyzing high-throughput –molecular data including, next-generation sequencing based genomics/transcriptomics as well as mass-spectrometry based proteomics/metabolomics data. Recently, my focus is on using deep learning methods to analyze the high-dimensional -omics data to infer associations in the data.

Till date, my research work has resulted in ~20 peer-reviewed publications and numerous conference proceedings and poster presentations (google scholar citations: ~580, h-index=11).

EDUCATION

2003 - 2007, PhD, Electrical and Computer Engineering, ODU, Norfolk, VA
Dissertation: Molecular dynamics simulations to probe effects of ultra-short high-intensity electric pulses on biological suspensions

2001 - 2003, MS, Electrical and Computer Engineering, ODU, Norfolk, VA
Thesis: Monte carlo analysis of millimeter-wave GaN Gunn diodes

PROGRAMMING SKILLS

Python, R, MATLAB
Git, Snakemake, Docker

BIOINFORMATICS TOOLS

GATK, BWA, Bowtie, Samtools, BEDtools
Byonic, PEAKS, Proteome Discoverer, OMSSA, MODa
BioCyc, MetaCyc, GROMACS, NAMD, VMD

PROFESSIONAL EXPERIENCE

Independent Consultant (Sivome LLC)

Universities, Hospitals and Startups

Oct 2018 - Present

In my current role, I am working for a proteomics software company.

In previous roles as Independent Consultant (part of 2016, 2017 and 2018) for MGH, WRI and biofuel startup

- Improved primer design for a proof-of-principle assay to capture long genomic regions.
- Built NGS pipeline and developed new computational methods for downstream analyses.
- Helped different groups with their data science and bioinformatic needs.
- Whole genome sequence (WGS) analyses, including variant analyses, copy number variation and strain specific analyses for biofuel production.
- Set-up in-house Jbrowse genome browser and Sequenceserver (blast+ web server).
- Helped analyze diverse mass-spectrometry datasets (global proteomics, phosphoproteomics) of breast cancer tissue samples.
- Integrated proteogenomics data to identify markers in laser capture microdissected breast tumor samples (Preliminary work published in AACR).

Bioinformatics Systems Developer

Booz Allen Hamilton

March 2018 - November 2018

- Helped in automating preprocessing of gene expression data (microarray and RNA-seq) for placental datasets using raw data stored in NCBI's GEO repository (PAT - Placental Atlas Tool).
- Improved analytics of differential expression, gene ontology and pathway analyses of the above preprocessed placental datasets (>20 RNA-seq and >300 microarray datasets).

Computational Biologist

UT Southwestern Medical Center

August 2015 - April 2016

- Protein and post-translational modification identification using Proteome Discoverer, OMSSA, Sequest, MASCOT.
- Quantitative proteomics (SILAC, TMT) data analysis using MaxQuant, Proteome Discoverer.
- Bioinformatics proteomics consultant work with UT Southwestern investigators.

Research Engineering/Scientist Associate V

The University of Texas at Austin

December 2012 - August 2015

- Built machine learning models using LASSO regression to predict bacterial growth conditions from in-silico metabolic fluxes generated from metabolic network based flux balance analyses (FBA) methods.

- Proteomics and metabolic flux data analyses of mass-spectrometry based datasets.
 - a. Proteomics data is analyzed using new unrestricted PTM search methods.
 - b. Metabolic flux data is analyzed using FiatFlux software.
- Molecular dynamics (MD) simulations for Bio-electrics applications
 - a. Compute intense MD simulations to understand multiple nanopore formation in lipid bilayers using advanced high performance computing environment.
 - b. MD simulations to understand effects of sodium (Na) and calcium (Ca) effects in pore formation within the biological suspensions.
- Helped multiple labs with proteomics bioinformatics consulting and short-term contracts.
- Taught computational mass-spectrometry in Big Data Summer School organized by CCBB (Center for Computational Biology and Bioinformatics every summer – 4 day course)

Visiting Research Fellow

National Center for Biotechnology Information (NCBI)

June 2007 - January 2012

- Part of NCBI OMSSA (Open Mass Spectrometry Search Algorithm) project:
 - a. Improved noise filtering routines/filters to accommodate high-resolution mass-spectrometry data.
 - b. Optimized algorithm for ETD data analysis (ion-types, precursor peak filtering).
 - c. User support by addition of requested enzymes, modifications, and other iontypes required for quantitative proteomics (iTRAQ, TMT 6-plex etc.).
 - d. Improved sensitivity by adjusting for mass offsets, precursor charge assignment for low-res data. Presented related mass-spectrometry work in ASMS '08, '09, '10 and '11.
- Integration of sequence data & high-throughput phosphoproteomics data:
 - a. Developed a new method (proof-of-principle) for PTM annotation on genomes (NCBI RefSeq) by using high-throughput proteomics data (PhosphoSite, PhosphoELM) and domain definitions of protein families within NCBI Conserved Domain Database (CDD).
 - b. Apart from the large-scale annotation of conserved PTM sites on genomes, this method could facilitate identification of novel evolutionarily conserved posttranslational modifications.
- Developed a prototype for new class of peptide identification search algorithm OMSSA-SIM.
 - a. Motivation is to remove most of the limitations faced by present generation sequence library search algorithms, for example, exact precursor mass match, unknown PTM's, mutations, different enzymatic cleavage etc.
 - b. Preliminary work in ASMS 2011 (oral presentation in computational mass-spectrometry).

Student Volunteer

Old Dominion University - Aerospace Engineering

Summer '06 • Helped improve programming drives for a test bogie run on MAGLEV (train using magnetic levitation).

Intern

Siemens Limited. Siemens Vdo Automotive

Summer '04 • Finite element analyses (2D) to improve fuel injection solenoid models using Ansoft software.

TALKS

1. Large-scale analysis of PTMs @ UT-Austin, Thermo Fisher Scientific, MD Anderson Cancer Center
2. Using subspectral interval matches to make novel identifications of ETD tandem mass spectra @ ASMS 2011
3. Predicting bacterial growth conditions from bacterial physiology @ Center for Systems and Synthetic Biology, UT-Austin
4. Open Mass Spectrometry Search Algorithm @ George Washington University
5. A comparative proteomics technique for large scale automatic annotation of posttranslational modifications on multiple genomes with reduced error rate @ NIH ProtIG Fellows seminar
6. Evolutionary conservation of phosphorylation sites – A mass spectrometric perspective @ NHLBI
7. Time Domain Dielectric Spectroscopy Study of Jurkat Cells and Mitochondria @ Frank Reidy Research Center for Bioelectronics
8. Time Domain Dielectric Spectroscopy Study of HL-60 cells induced by Ultra-Short pulses @ Frank Reidy Research Center for Bioelectronics
