PROFILE

Project management skills with experience in developing bioinformatics methods and building bioinformatics pipelines for NGS and mass-spec technologies. Recent focus is on single-cell analyses and ML methods such as deep learning.

Comfortable using high-performance (and cloud) computing methods in *nix environment coupled with technologies such as Snakemake, docker containerization. Proficient in Python/R/MATLAB.

Worked for industry, government and academia. Past research work is funded by Army research office (ARO MURI grant), Department of Defense (DoD MURI grant) and National Institutes of Health that led to additional grants for PIs.

EDUCATION

2003 - 2007

PhD, Electrical and Computer Engineering, ODU, Norfolk, VA

Dissertation (funded by Department of Defense MURI grant): Molecular dynamics simulations to probe effects of ultra-short high-intensity electric pulses on biological suspensions to understand how nano-second pulsed electric fields (nsPEFs) kill cancer cells.

2001 - 2003

MS, Electrical and Computer Engineering, ODU, Norfolk, VA

Thesis: Monte carlo analysis of millimeter-wave GaN Gunn diodes

TECHNICAL SKILLS

Machine learning

Regression, Regularization, Hierarchical Clustering, Discriminant analyses

Programming

Python (numpy, pandas, scikit-learn, matplotlib, keras), R (tidyverse, ML packages), MATLAB, Perl, UNIX, MacOS, LaTeX

BioFX Pipeline	Cloud computing, Git, Snakemake, Docker
Engineering	Monte-carlo models, Molecular dynamics simulations
NGS	Bulk RNA-seq: HISAT2, featureCounts, GATK, BWA, Bowtie, Samtools, BEDtools (familiarity with TCGC, ICGC datasets) Single cell RNA-seq: CellRanger, Seurat, Monocle3, fastMNN, SAVER
Mass-spec	Byonic, PEAKS, Proteome Discoverer, OMSSA, MODa (familiarity with CPTAC, Tranche, PRIDE, PeptideAtlas datasets)
Systems Biology	BioCyc, MetaCyc, SAINT
MD Simulations	GROMACS, NAMD, VMD

PROFESSIONAL EXPERIENCE

Jun '19 - Present

Senior Bioinformatics Scientist

Argentys (FDA, universities and hospitals contract work)

Contractor at Food and Drug Administration (Jun' 19 - Aug' 20) CBER HIVE Team

Informatics Projects at FDA

- Helped in building RNA-seq pipeline for automated bulk processing of large-scale genomics datasets (fastp, HISAT2, featureCounts, DESEQ2)
- Built single-cell RNA-seq workflow for analyzing 10X single cell datasets (CellRanger, SAVER, Seurat/Monocle, fastMNN and other R packages)

Sample Research Projects at FDA

- Characterization of the Immune-Driven Drug Hypersensitivity by Single-Cell RNA Sequencing Technologies
- Identifying Molecular Features of Neural Stem Cells in Varied Differentiation Stages
- Single cell RNA-seq analyses to investigate sub-populations of bone-marrow and adipose derived multipotential stromal cells (MSCs) from 3 donors

Universities and medical centers (current contract)

- NGS analyses of targeted LINE-1 retrotransposons data
 - NGS analyses to understand vaccine stability
- (took a 5 month break to stay in India between FDA role and current contract)

Apr '16 - May '19

Independent Contractor

Universities, Hospitals and Startups

Independent Consultant / Contractor for MGH, WRI, biofuel startup, Booz Allen Hamilton and ProteinMetrics

- At ProteinMetrics, tested ProteinMetrics suite of tools.
- At Booz Allen Hamilton, worked on Placental atlas tool (PAT), a meta-data driven web interface to analyze gene expression data on the fly. Automated workflow and improved data analytics to analyze gene expression data (300 microarray datasets and 20 RNA-seq datasets - 1000's of samples)
- At Mass General Hospital, developed bioinformatics methods for an assay to capture and clone long dna fragments in high-throughput and cost effective way. [Published in Nature Biomedical Engineering]
- At biofuel startup, whole genome sequence (WGS) analyses, including variant analyses, copy number variation and strain specific analyses for biofuel production. Additional work to set-up in-house Jbrowse genome browser and sequence server
- At WRI (in collaboration with PNNL), integrated proteogenomics data (>100 RNA-seq and >50 mass-spec) to identify markers in laser capture microdissected breast tumor samples (Preliminary work published in AACR).

Dec '12 - Apr '16

THE UNIVERSITY OF TEXAS SYSTEM (UT AUSTIN, UTSW MEDICAL CENTER DALLAS)

Research Engineering/Scientist Associate V Dec '12 - Aug '15

The University of Texas at Austin – CENTER FOR COMPUTATIONAL BIOLOGY AND BIOINFORMATICS

- Army research office MURI grant (multi university, incl. Boston University) to build mathematical models to infer associations in multi-omics data
 - a. Novel PTM identification using Unrestricted bioinformatic search of large-scale mass-spectrometry based proteomics data generated for multiple E. coli growth conditions.
 - b. ¹³C Metabolic flux analyses for the same above mentioned samples using FiatFlux and other software.
- Built machine learning models using LASSO regression to predict bacterial growth conditions from *in-silico* metabolic fluxes generated from metabolic network based flux balance analyses (FBA) methods.
- Helped multiple labs with proteomics bioinformatics consulting and short-term contracts.
- Taught computational mass-spectrometry in Big Data Summer School organized by CCBB (Center for Computational Biology and Bioinformatics every summer – 4 day course)

Computational Biologist Aug '15 - Apr '16

UT Southwestern Medical Center – PROTEOMICS CORE FACILITY

- Protein identification and quantitation using bioinformatics tools (e.g., OMSSA, MASCOT, Sequest, ProteomeDiscoverer, MaxQuant, SAINT).
- Bioinformatics proteomics consultant work with UT Southwestern investigators.

Jan '12 - Dec '12

Scientific Programmer

Samuel Roberts Noble Foundation

- Helped integrated GenoLogics LIMS system with mass-spec equipment • Built pathway databases using MetaCyc and PathwayTools

Jun '07 - Jan '12

Postdoctoral Fellow

National Center for Biotechnology Information (NCBI) OMSSA (Open Mass Spectrometry Search Algorithm) project

- OMSSA User support by addition of requested enzymes, modifications, and other iontypes required for quantitative proteomics (iTRAQ, TMT 6-plex etc.). ETD / OMSSA work presented in ASMS '08, '09, '10 and '11.
- Developed a new method (proof-of-principle) for PTM annotation on genomes (NCBI RefSeq) by using high-throughput proteomics data (PhosphoSite, PhosphoELM) and domain definitions of protein families within NCBI Conserved Domain Database
- Developed a prototype for new class of peptide identification search algorithm OMSSA-SIM.

Summer '06

Student Volunteer

Old Dominion University - Aerospace Engineering

- Helped improve programming drives for a test bogie run on MAGLEV (train using magnetic levitation).

Summer '04

Intern

Siemens Limited. Siemens Vdo Automotive

- Finite element analyses (2D) to improve fuel injection solenoid models using Ansoft software.

Aug '03 - May '07

OLD DOMINION UNIVERSITY (JOSHI LAB, FRANK REIDY RESEARCH CENTER FOR BIOELECTRICS)

Graduate Research Assistant Aug '03 - May '07

COMPUTATIONAL RESEARCH LAB - BIOELECTRICS

- DoD MURI grant (multi university, incl. MIT) to model/simulate how nano-second pulsed electric fields (nsPEFs) kill cancer cells
 - a. Compute intense Molecular Dynamics (MD) simulations to understand multiple nanopore formation in lipid bilayers using advanced high performance computing environment.
 - b. MD simulations for microscopic calculation of local lipid membrane permittivities and diffusion coefficients, and to understand effects of sodium (Na) and calcium (Ca) ions in pore formation within the biological suspensions.

Research Assistant V May '04 - Dec '06

FRANK REIDY RESEARCH CENTER FOR BIOELECTRICS

- Time Domain Dielectric Transient Spectroscopy (TDDS) measurements to monitor intrastuctural changes in leukaemic cells after nanosecond pulsed electric field application.

GRANT REVIEWER

National Science Foundation (NSF)

JOURNALS REFEREED

Journal of Proteome Research, PLoS Pathogens, Journal of Theoretical Biology, Biology Direct, PLoS Computational Biology

PROFESSIONAL MEMBERSHIPS

- American Association for Cancer Research
- American society for mass spectrometry

AWARDS

- June 2007: NIH Postdoctoral Fellowship
- April 2007: Outstanding Graduate Researcher Award (Ph. D.)
- June 2006: Old Dominion University BCET Scholarship
- April 2006: Honorary Mention for ODU Research Foundation Day Poster Presentation
- 1996-2000: National Merit Scholarship, College of Engineering, Osmania University
- 1994-1996: College Scholarship, St. Thomas Samhita Jr. College
- May 1994: Certificate of merit in Math

SELECTED TALKS

1. Large-scale analysis of PTMs @ UT-Austin, Thermo Fisher Scientific, MD Anderson Cancer Center
2. Using subspectral interval matches to make novel identifications of ETD tandem mass spectra @ ASMS 2011
3. Predicting bacterial growth conditions from bacterial physiology @ Center for Systems and Synthetic Biology, UT-Austin
4. Open Mass Spectrometry Search Algorithm @ George Washington University
